Description:

Meet Milena. First "Quick Bunny" Doll on the Doll project. She was convicted of corporate espionage and re-bought by the Pink Bunny Corporation. Now we have to decide what kind of research will be conducted on her.

Story info:

"Quick Bunnies" are very short stories stripped to the most important part (illustrations). Each part of "Quick Bunny" will cost only 2000 pills and will have only two or three pictures: "Before - After" picture and "Action" picture. There will be more than one voting one after another after each part in order to give you full spectrum of options each time.

Pills per voting: 3000

Pictures per voting: 2

Milena Zyablikova was sentenced to capital punishment. The "Pink Bunny" corporation bought her for their own purposes. Now, as subject H-514 she shall be used in scientific research on new technologies used in the manufacturing of sex dolls. In exchange, her punishment was reduced to six years of being deprived of human rights.

Now we have to decide what kind of research will be conducted on her:

Piggy: Piggy eats all the time whenever she want it or not. She's becoming fatter and fatter day by day. Strong hormones in her fodder causes her breasts to grow immensely. Her anus and vagina are being constantly stretched and enlarged in order to mach her giant proportions.

Pussy pet: This girl Is addicted to her heavy modified vagina. Her pussy is huge and full, it can accommodate very big toys. There are way more different ways to pleasure her flower then any woman could imagine. Super enhanced pussy dominates pets entire live

Tamagotchi: The subject which has undergone the tamagotchi shall require constant attention from its owner. It has to be taken care of, regularly milked and its other needs have to be satisfied, otherwise the tamagotchi feels very severe discomfort. It has to be helped in many mundane tasks such as movement and masturbation. Tamagotchi feels pleasure much more strongly than a normal woman, which is why the person having sex with it has to be very careful.

Titsy: Dolls breasts are being enhanced to the point when they become the dominant part of her life. Their size, sensitivity and milk production increases dramatically. Improved bust also has many other advanced features. For this reason, most of the Titsys activities are focused on her own breasts.

Blown Doll: A simple project resulting in the subject being pumped beyond all limits. The subject is fattened with high-caloric gruel which includes hormones. At the same time it's lips, breasts and buttocks are synthetically enlarged. Blown Doll is an ideal solution for brothels and lazy owners, who lack the patience to bind their lover every time they want to rape her. After some time, her proportions become so huge, she cannot resist at all and binds become unnecessary.

Beast In Heat: The last option is all about drastically increasing appetite for sex and unnatural increase of subject's muscle tissue. The treatment creates a woman with huge strength, who thinks only about sex. She is so horny she will do everything to be sexually satisfied. Designed to be kept in a cage as an exotic wild animal. She is a perfect tool for punishing disobedient slavegirls. Being locked together with the beast is an unforgettable lesson for them.

This is the first voting of two. The second one will contain more details describing the selected option.

See voting results below.

Which research program shall we try?

Titsy

It looks like the rest of Milenas live will be dominated by her own super enhanced breasts. But what are the details of her transformation?

See voting results below.

Breast enlargement shape

Super Fake (spherical)

Additional breast modification

Lactation inductor

Emotional state

Terrified

Event

Force Pleasured by another woman

Millena was shocked when she saw her new spherical breasts protruding from the chest.

Moreover when she touched and probed her newly enhanced bosom she felt milk flowing from her nipples.

When the nurse told her that it's just a beginning of the program she was terrified.

Another phase.

Milker - milking process is necessary and pleasurable

Hair

Do not change

Emotional state

Terrified

Event

Self milking

After another visit to surgery, Milenas breasts became huge, heavy and so loaded with milk that it slowly flowed out by itself.
- Oh my god! - She thought - They look like soccer balls! I didn't realize they could be so round and big! How would I live with them? My back is gonna kill me!

Soon she discovered that it was just a beginning of her problems. Her breasts produced milk in such rate that they quickly began to hurt and were begging to be milked. Milena was terrified...

...Left alone in her cell she had to do it herself.
When she squeezed her sore nipples the milk
flowed with powerful stream. An unexpected
pleasure caught her of guard.

Voting - Part 4

Breast enlargement shape

Super Fake (Light tissue)

Additional breast modification

Huge, long and very sensitive nipples

Emotional state

Aroused

Event

Force milking

Milenas breast produced milk in such rate that when the girl doesn't milk herself it starts to slowly flow out after a few hours. Therefore, doctors founded her special skin-tight top that tightly covers her breasts and can absorb a large amount of milk like diaper.

After another surgery her breasts were enlarged once again. Their weight has not changed, however. They stuck in front of her like two big balls full of milk. Her nipples have also been enlarged and were now huge, long and very sensitive.

Milena involuntarily began to fondle her big nipples. They were now very sensitive. She could feel the lightest touch, even through the thick fabric of her breast diapers.

Girl was Immobilized in a special chair and connected to the suction machine. She was scared but also very aroused. It was a very strange mix of emotion.

Machine sucked her long nipples stretching them even longer. The device was milking her until milk ceased to flow. Then it was switching into standby mode. When her udders produced enough milk the machine was starting again. Pleasure and excitement were so great that Milena had lost track of time.

Another breast enlargement

Yes

Additional breast modification

Nipple areola becomes much bigger and much more sensitive

Special Milking Effect

Milking is even more pleasurable and may lead to an orgasm

Event

Action outside lab

We have to collect necessary amount of pills. Current pills status: 2352 / 3000

Milena was convinced that her breasts reached a size so large that scientists will stop further increase.

Unfortunately she was wrong. The "Titsy" project has already started and would continue until her breasts had completely dominate her life. Scientists enlarged her bust even more, and it was so huge that it interfered with basic activities. From the continuous growth her areolas had become huge.

They also become very sensitive and Milena could not resist the constant cuddling and milking herself. Her breasts needed more and more attention.

As an experiment scientists took her for a walk to the park. She was embarrassed and had the feeling that everyone stares at her gigantic breasts. She was like an animal in a zoo, or a tourist attraction.

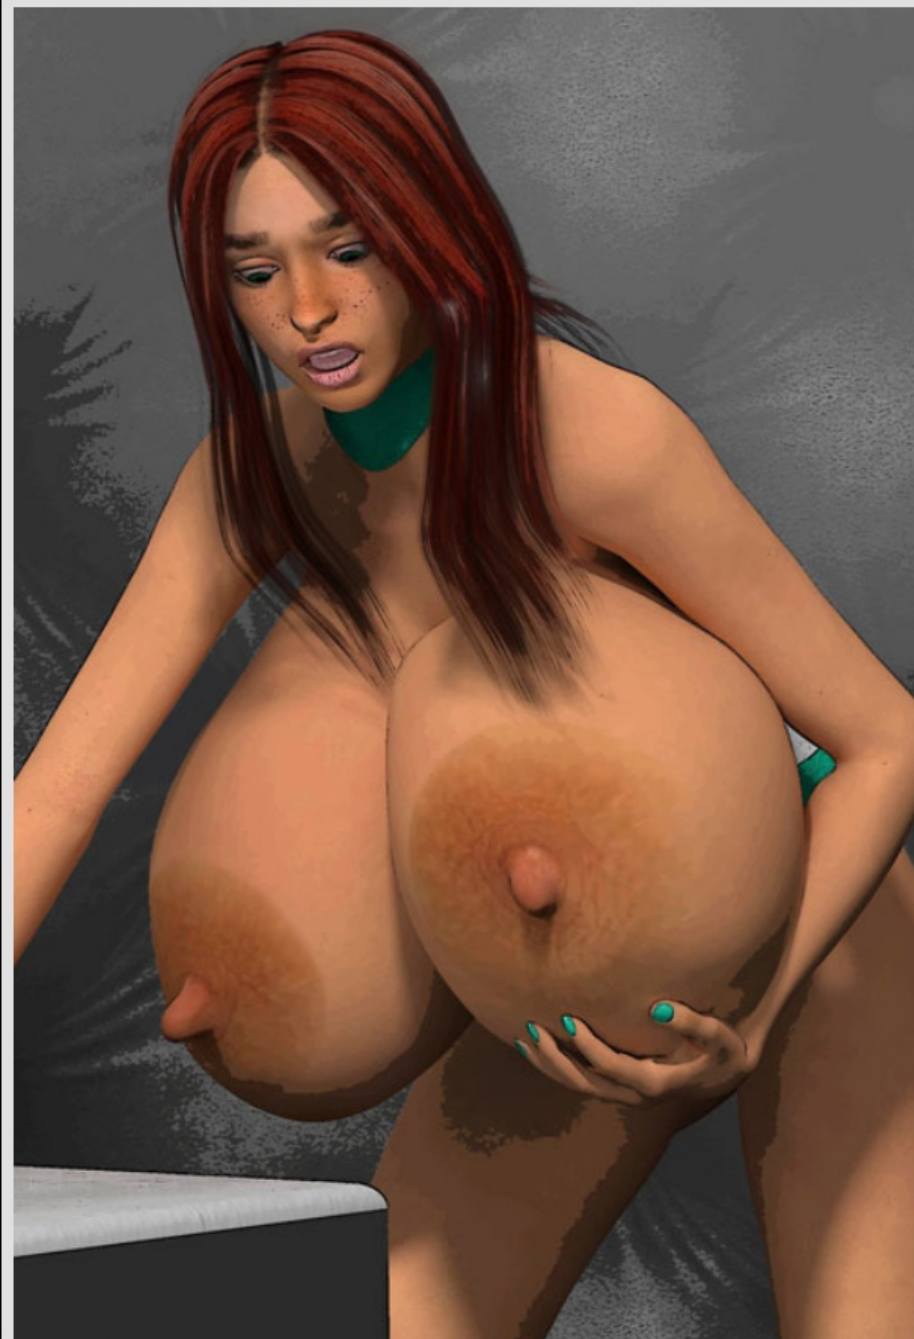

To relieve stress, unconsciously she began to massage her giant breasts and pamper sensitive areolas. Sensations were so strong that it led to an orgasm. Before she regain control over herself she spent more then hour on the bench masturbating with her own breasts.

- Do you think your boobs are too much? - Asked the nurse when she return to lab. - Oh, no, my little Titsy, it's just the beginning! When we're done with you, your breasts will be the center of your world. They will be your personal temple and passion. You will worship them and curse them at the same time. You will be a toy, an interactive pleasure sensor, attached to gigantic funbags.

Further treatment...

Breast Modification

Nipple fuck modification

Special Milking Effect

Milking increases sexual arousal

Milena was horrified by the prospect of another surgery. She was feared that if her breasts continue to grow at the current rate they would soon prevent her from moving.

It turned out, however, that further treatment did not affect their size. With surprise, she discovered that her nipples have become much larger and much more sensitive. Touching them resulted with a unique pleasure.

Fondling her huge nipples Milena noticed with surprise that she is can slide her fingers inside! It turned out to be an incredible pleasure. Gentle touch ot he inner side of her teat was a wonderful feeling.

The scientists introduced a new milking system. The milking tips were inserted into the nipples and blocked inside. The pleasure of this treatment was exceptional but Milena felt humiliated, she had the impression that the machine is literally raping her breasts.

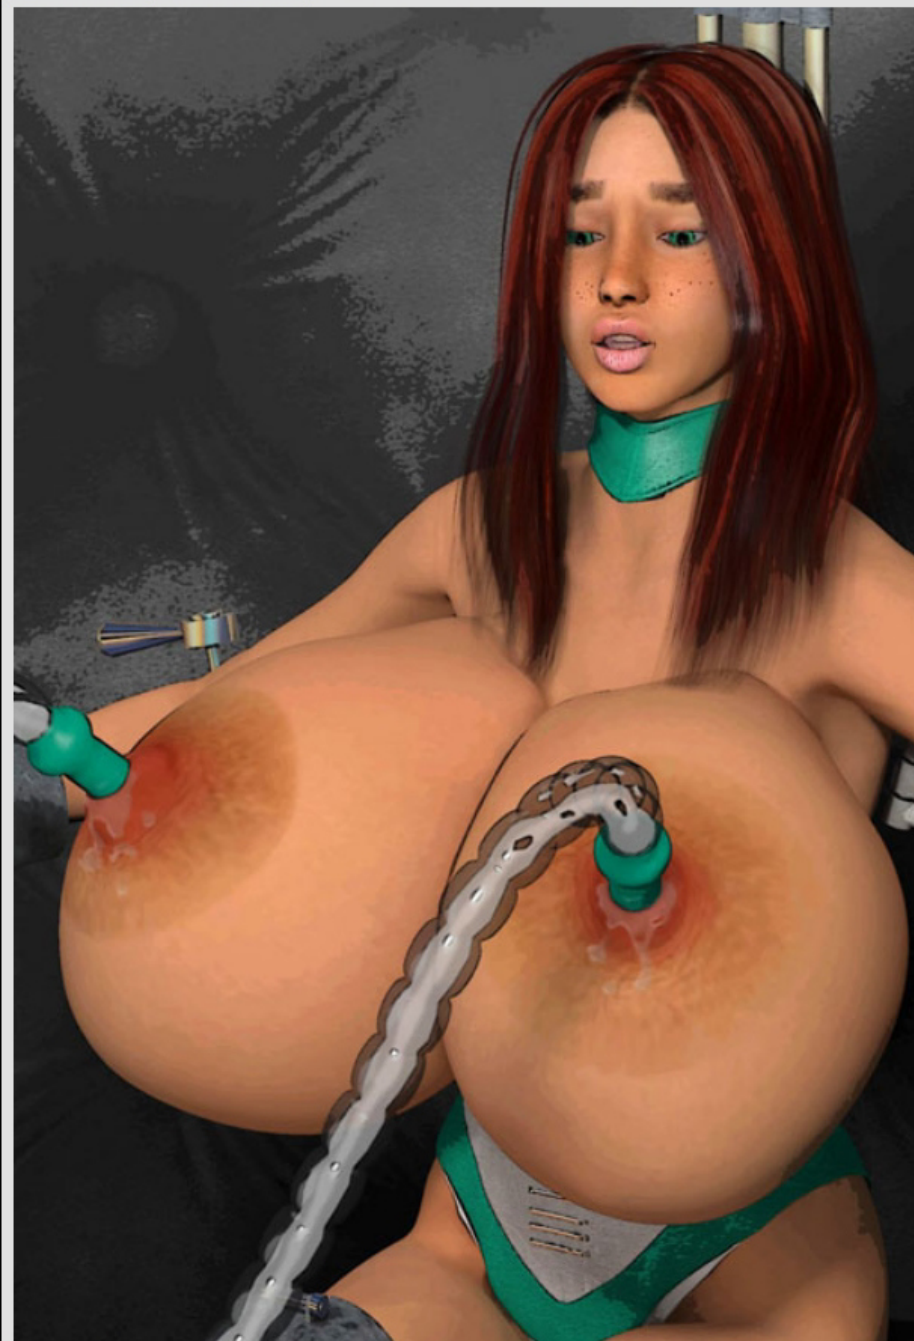

Milking tips vibrated inside her breasts to stimulate increased production. Despite Milena was ashamed of her new licentious body her excitement grew at an alarming rate. Humiliating process of milking her giant udders drove her to the peak of desire. When the machine finished it's work she dreamed only of sexual release. She was so excited that she didn't care anymore how obscene her body became. She just wanted someone to fuck her in all possible holes and do it again and again until she can't reach another orgasm. And then the nurse entered the room with a big set of vibrators in her hands.

The woman focused on girls huge tits. Milenas pussy was dripping with excitement but nurse did not bother to even touch it. Instead she pushed the toys straight into her big nipples and fucked her giant udders vigorously .

Pretty soon Milena realized that milking enhances her excitement. Whether she was treated by the machine, or she was squeezing milk out of her enormous breasts by herself. When milking was coming to an end she was so excited that she thought only about sex.

Although she tried to do it normally, her obscene body excited her in some kinky way. That made her so aroused that she couldn't control her passion anymore and begun raping her own giant breasts, putting her tiny fingers inside.

Another set of experiments

See voting results below.

Breast modification

Bigger and wider nipples

Hormonal changes

Bigger butt

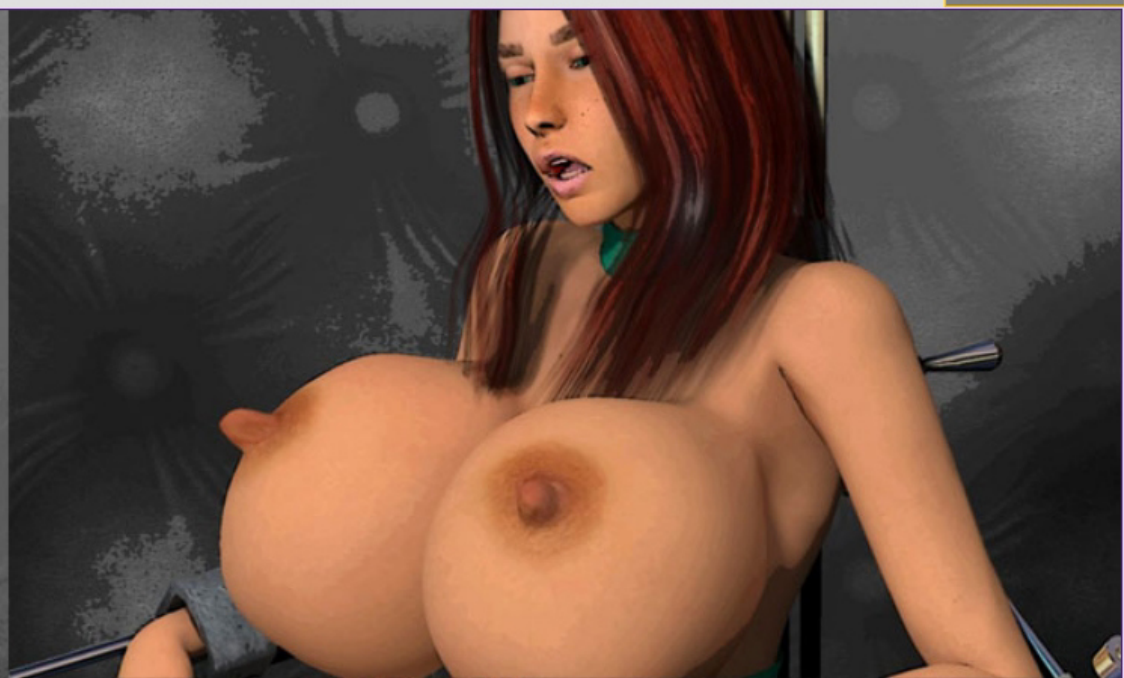

Milena's bust was huge and required regular milking. This process was necessary and very pleasant. When the procedure was neglected the excess milk accumulating in her large chest caused big discomfort. Nevertheless, the scientists working on the development of H-514 disassociated the milking machine.

Now, Milena must milk herself in regular intervals. This way scientists teach her that she has to care for her breasts on her own. It's very important because there will be more and more responsibilities until taking care of her own breasts fills all her time.

Once again, the procedure was performed on her nipples. They became even larger and more sensitive.

Continuous improvement have changed them from the ordinary nipples into huge protruding teats used for milking and penetration.

After disconnecting from the machine, she realized that milking is a complex process. Squeezing milk from her huge breasts caused significant increase of arousal. When the milk comes out from her udders Milena is close to climax. At this point, however, orgasm would be very unwanted.

When H-514 climaxes her huge nipples tighten throwing a stream of milk, but the rest of the liquid remains locked inside. Therefore, Milena has to put her fingers deep inside the nipple in order to prevent her tightening climaxing breast from obstructing the flow of milk.

It is very difficult, because during milking she is so aroused that even a brief penetration of her super sensitive teats can lead to premature orgasm. When her fingers are in place she starts massaging the breast with the other hand and squeeze the milk from it. It often takes her two or three orgasms per udder before she finishes milking.

Her huge breasts require so much attention now that Milena almost ignored the fact that scientists have also enlarged her bottom.

The experiments are going well, and soon Milena will to be sold to the new owner. Further changes will be carried out under his or her needs. For now, however, she must remain in the laboratory. Her breasts still don't meet the basic criteria of "Titsy".

Now, researchers have to decide what should be the final modification before they put H-514 on the auction. All changes on their list are very serious and will strongly affect the future use and life of Milena.

Additional mammary glands (Significant Enlargement)

Big amount of bioengineered mammary glands would be implanted in her breasts. This procedure would make her udders significantly bigger and turn them into real milk factories. Increased production would come in pair with new duties. She would have to drink a lot of special supplement needed for accelerated milk production and regularly message her hard-working bust.

Fondle implants (Standard Enlargement)

Special implants that make the breast cuddling so pleasurable that it may cause orgasm. It works exceptionally good during the titty-fuck activity. Breast would require special massage twice a day otherwise they will start to hurt.

Super sensitive breast skin (Standard Enlargement)

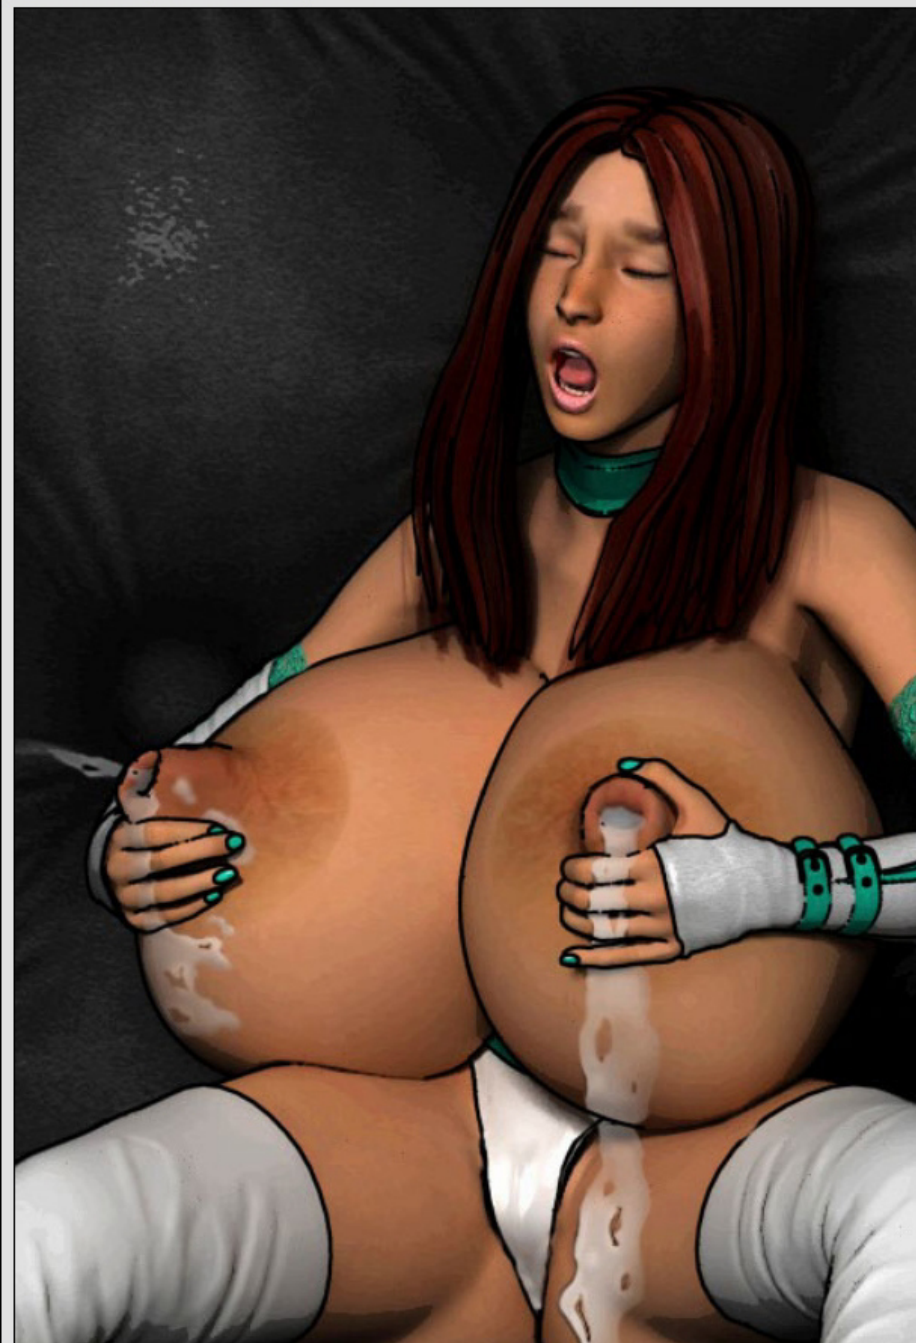

Upgraded sensitive skin on the chest makes creasing extremely pleasant. Even wearing clothes covering such bust becomes a unique experience. This kind of breasts require constant skin care involving the daily rubbing oils. The care procedure is time-consuming, but very enjoyable. This comes in pair with standard breast enlargement.

Baloon boobs (Big Enlargement)

Significant increase of the breast tissue volume without changing its mass has the effect of "balloon breasts". They are very large but comparatively light. In order to maintain proper shape they require daily exercise involving swinging breasts up and down (jogging, rope jumping, etc..).

Stationary Boobs (Big Enlargement)

Procedure involving a bust size similar to "Baloon Boobs" but achieved by using standard weight nano-tissue. Breast remain spherical but due to its weight will fall much lower. Stationary boobs are so big and heavy that comfortable movement is possible only when subject is using special reinforced bra supporting their weight.

Now, let's choose the big change and her future buyer.
