

Okay, since we know it worked with your own hand, let's give this a try next.

Ah... I didn't expect you to... No matter. We can see how long your refractory period is.

Oh, is that seminal fluid? Hmm.

AHH... I COULDN'T HELP IT. IT'S BEEN A LONG TIME... DAMMIT, WHY DID I HAVE TO FINISH SO FAST...

It looks to be functioning quite well. Does anything feel off?

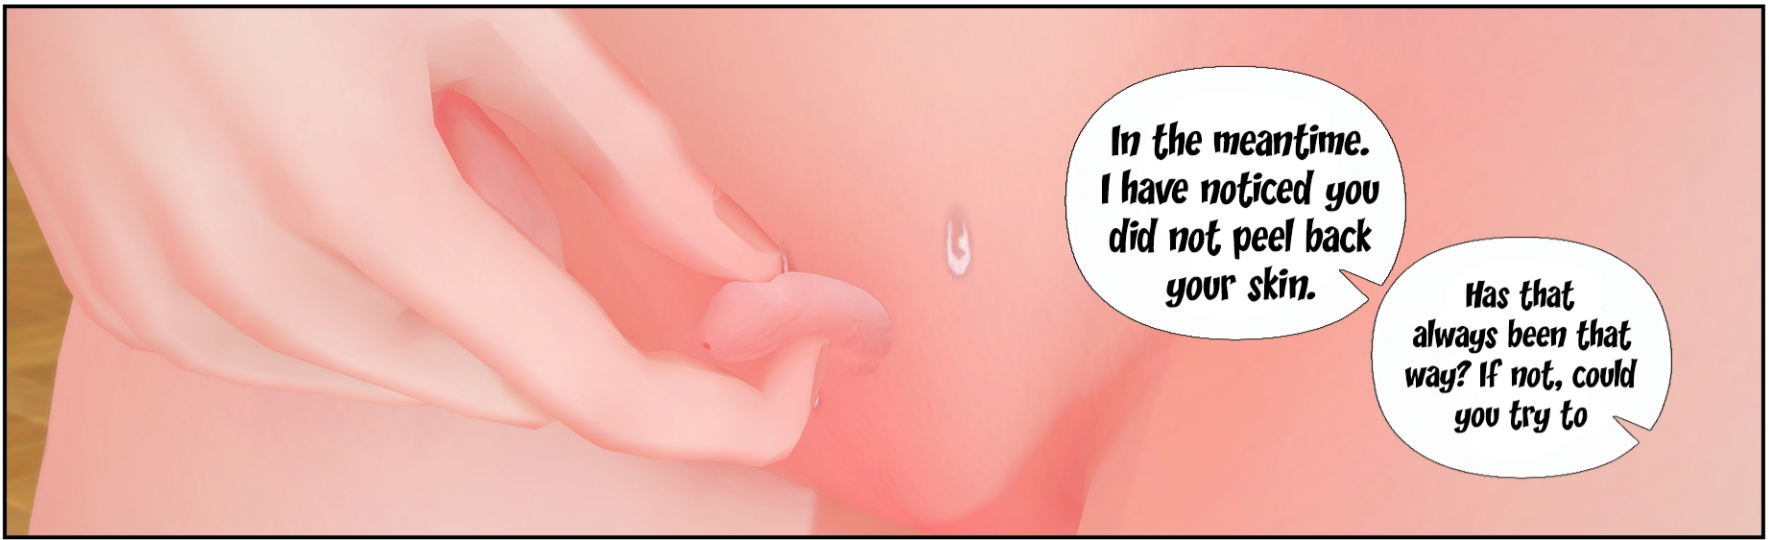

OTHER THAN IT BEING SMALLER... I... UHH... IT FEELS... IT'S MUCH SOFTER, AND DEFINITELY MORE... SENSITIVE...

Estrogen is responsible for the softness, and the sensitivity is most likely due to lack of use.

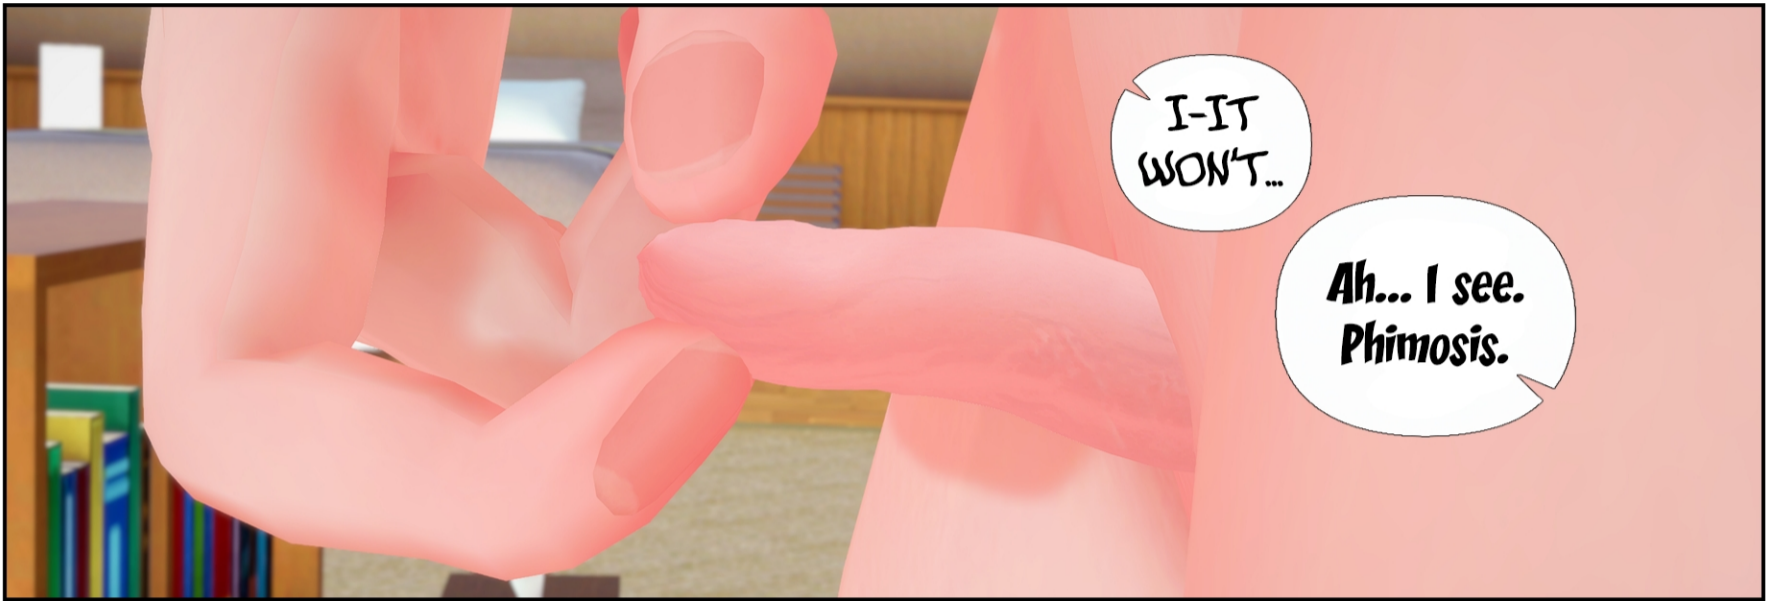

Alright, after your refractory period is over, we can do a final test with this.

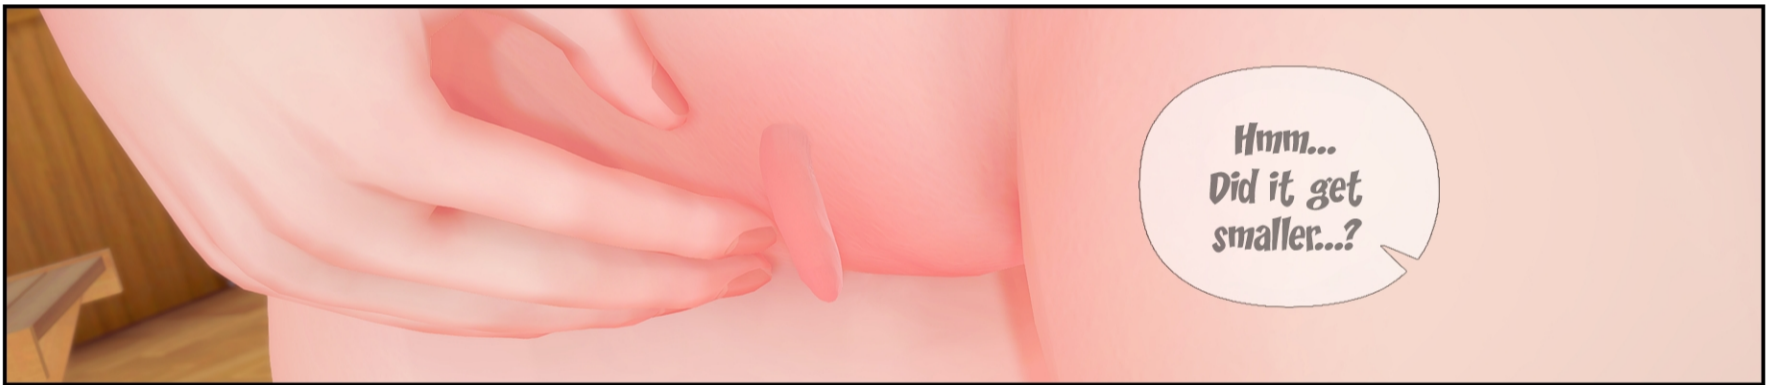

In the meantime. I have noticed you did not peel back your skin.

Has that always been that way? If not, could you try to

I-IT WON'T...

Ah... I see. Phimosis.

Hmm... Did it get smaller...?

Did it get smaller due to use, or is that how long it lasts.. perhaps we have hit the half-life?

Well, Leona... It's been around 10 minutes. It's time for the final test.

We already know that you can self-pleasure. The next test is if you are able to give pleasure.

Doing it with your hands defeats the point.

So I will hold this. All you need to do is penetrate it.

I don't want Leona thinking it will work then getting humiliated when she tries. This way we confirm it before hand.

AH... I...
OKAY...

AFTER THIS...
IT WILL
BE OVER.

She
failed...

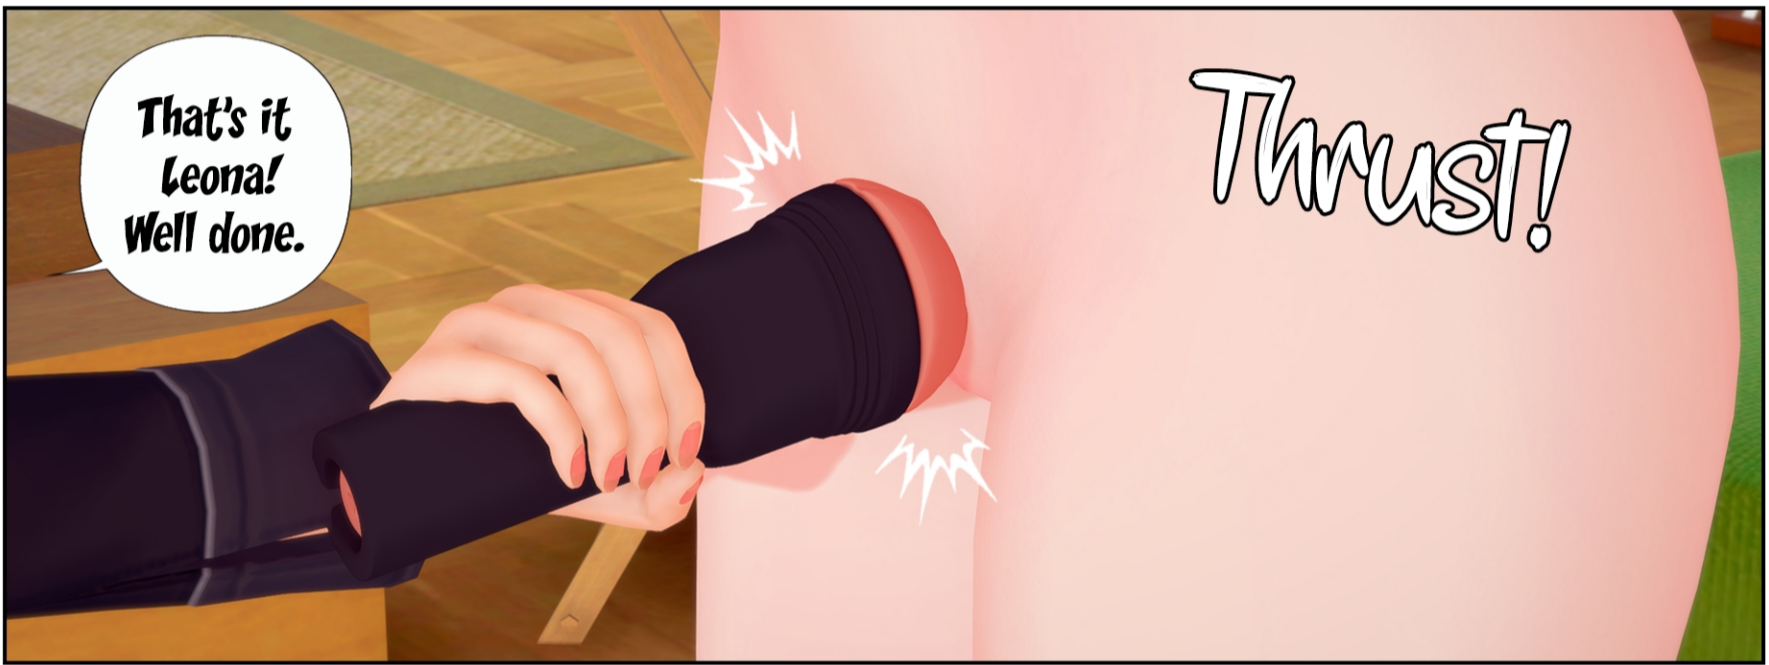

Thrust!

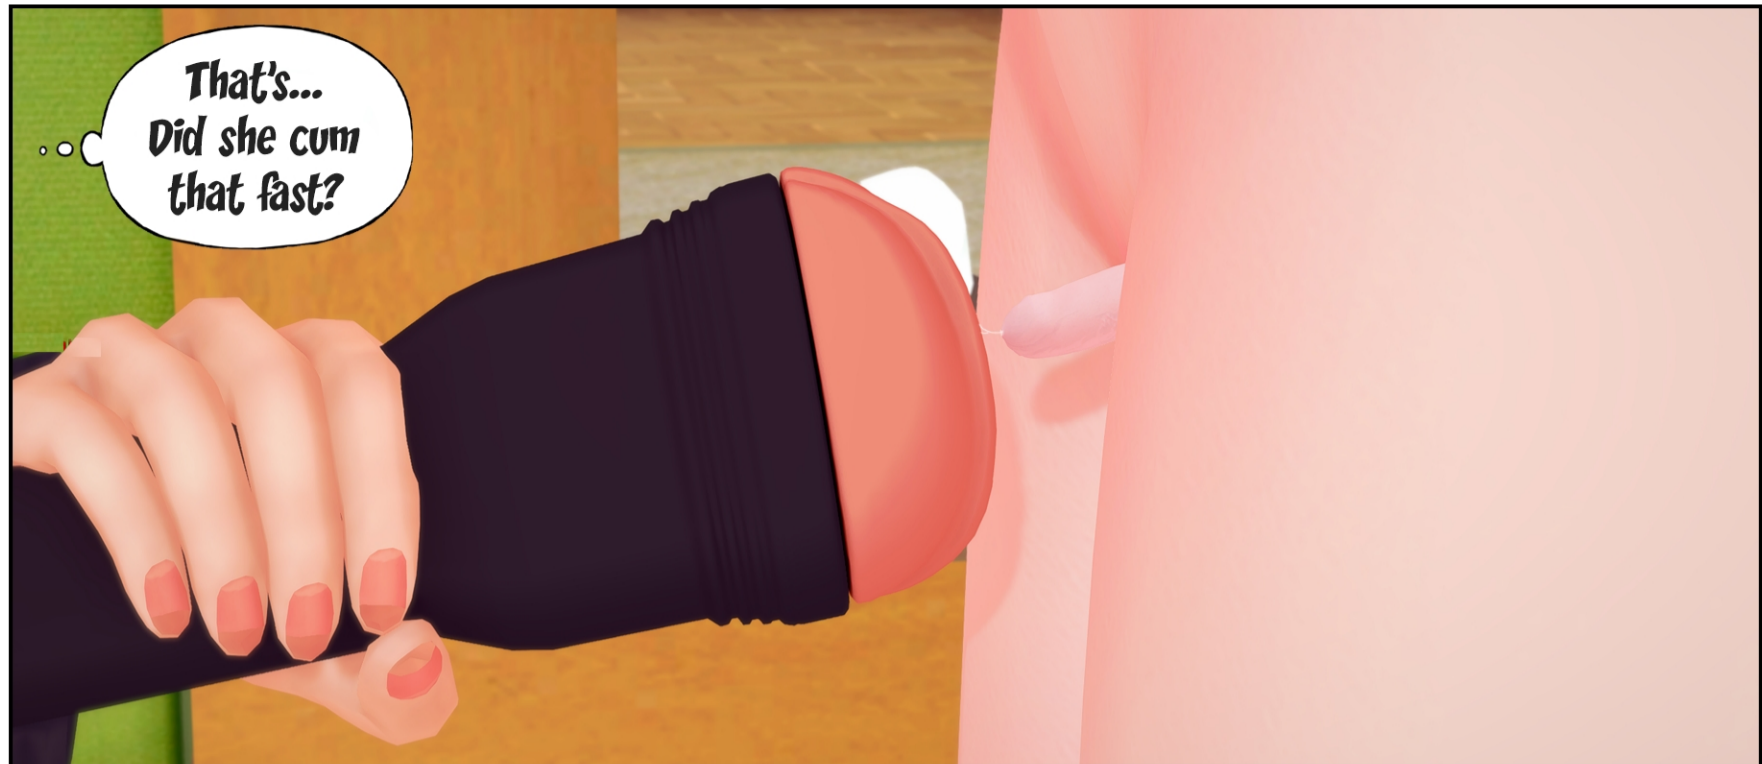

Almost... I'm sure
you can do it.
Try again.

DAMMIT...

IT DIDN'T
GO IN...

That's...
Did she cum
that fast?

I-IT WAS
SO TIGHT...
I-I COULDN'T
RESIST...

Ah... She didn't even
last one thrust? Is it that
sensitive now... I suppose
I need to make something
to help with that
as well.

I'm so fucking excited!

Calm down.

Says the horny one~

Am not... Why did I even bring you.

To help choose the sexiest lingerie of course!

Why did I think doing this now was a good idea.

Bulge!
